# Sanskar Jain

Associate Software Engineer | Pune, Maharashtra, India | 9021620156
sanskarjain0901@gmail.com | LinkedIn

## Professional Summary

Early-career backend engineer with 2 years of experience building production APIs and distributed services for SaaS workflows. Strong foundation in object-oriented development, data structures, backend design, and high-volume service delivery through hands-on work at Verisk Analytics. Built reliable services with Java, Spring Boot, MongoDB, Elasticsearch, REST APIs, CI/CD, debugging, and production support in agile teams. Looking to contribute to Ontic by shipping high-quality backend features, improving system reliability, and growing into an independent engineer.

## Key Skills

**Backend Development:** Java, Spring Boot, REST APIs, Microservices, Web Application Development, Object-Oriented Design
**Databases & Search:** MongoDB, Elasticsearch, PostgreSQL, MySQL, Database Design, Data Modeling
**Engineering Practices:** Data Structures & Algorithms, Unit Testing, Debugging, Code Reviews, Git, Agile Collaboration
**Cloud & Tools:** AWS (S3, SNS, Lambda), Azure DevOps, CI/CD, Docker, Kubernetes, Swagger, Splunk

## Experience

**Verisk Analytics** Jan 2024 – Present
Backend Engineer Hyderabad, India

- Built and maintained Java Spring Boot backend services and REST APIs for import/export of 30+ data types, using MongoDB persistence and asynchronous workflows to reduce transfer time by ~40% and user-reported issues by ~25%.
- Implemented and tuned Elasticsearch-backed search and retrieval flows for high-volume service data, contributing to faster access patterns and helping improve average API response time by 35% across 200K+ weekly requests.
- Wrote maintainable, well-tested production code and resolved backend defects through debugging, logging analysis, and code reviews, improving system reliability and reducing repeat support tickets by 30%.
- Collaborated with engineers and product stakeholders on sprint delivery and CI/CD improvements that cut deployment time by 50%, while communicating blockers and progress clearly across environments.
- Contributed to event-driven backend workflows using AWS SNS, Lambda, and S3 to support scalable asynchronous processing and reliable data movement across services.
- Worked in a 6–8 member agile team to deliver 10+ backend features per quarter, align implementation with product requirements, and communicate technical decisions clearly to stakeholders.

## Projects

**Expense Tracker – Full-Stack Microservices Application** Aug 2023 – Dec 2023

- Developed a microservices-based expense platform using Java Spring Boot with API-driven services and domain-focused design, supporting 1,000+ simulated transactions.
- Implemented asynchronous inter-service communication with Kafka and Zookeeper to improve decoupling and support scalable backend processing.
- Containerized services with Docker and integrated Kong API Gateway for routing and authentication, reducing environment setup time by about 60%.

**Stock Recommendation and Prediction** Apr 2022 – Jun 2022

- Built a Python-based stock advisory platform using LSTM time-series models to forecast 30-day market trends across multiple investment horizons.
- Integrated external APIs and Firebase-backed data storage, then deployed the application with Streamlit to deliver a usable end-to-end web experience.

## Education

**Bachelor of Technology in Computer Engineering** – Vishwakarma Institute of Technology, Pune (SPPU) 2024 | CGPA: 8.8
