Sanskar Jain

Java Backend Engineer | Spring | AI Automation | Scalable Platforms
Pune, Maharashtra, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Software Engineer with 2+ years of experience designing and maintaining scalable backend platforms for web applications using Java/J2EE, Spring Boot, web services, and rules-driven business workflows. Hands-on with REST/SOAP APIs, JSON/XML integrations, MSSQL/Oracle-style relational systems, DevOps pipelines, and Agile Scrum delivery. Built AI-powered agents and automation workflows to streamline operational processes, improve debugging turnaround, and accelerate feature delivery in high-performance environments.

Key Skills

Backend & Platforms: Java, J2EE, Spring Boot, Rules Engine, REST, SOAP, Web Services, Microservices, Application Servers, Web Servers
AI & Automation: AI agents, workflow automation, model-assisted process automation, prompt-driven tooling, R&D prototyping
Data & Databases: SQL, MSSQL, Oracle, PostgreSQL, MongoDB, query tuning, schema design
Engineering: Data structures, algorithms, OOP, debugging, fact-finding, Agile Scrum, CI/CD, Azure DevOps, Docker, Kubernetes

Experience

Verisk Analytics Jan 2024 – Present
Backend Engineer Hyderabad, India

- Designed and maintained high-performing Java and Spring Boot backend services for large-scale web workflows, supporting 200K+ weekly requests while improving average response time by 35% through optimized service orchestration and API design.
- Built REST and SOAP web services with JSON/XML contracts and rules-driven validation flows, enabling reliable integration across UI modules, enterprise services, and downstream data-processing systems.
- Developed AI-powered internal agents and automation workflows for ticket creation, task routing, and process assistance, reducing manual operational effort by 40% and speeding issue handling across engineering teams.
- Improved platform reliability by tuning SQL-heavy workflows across MSSQL-, Oracle-, and document-based data layers, cutting report and data retrieval times by 45% and strengthening debugging and root-cause analysis for production issues.
- Strengthened CI/CD delivery in Azure DevOps with automated builds, tests, and deployment gates, reducing deployment time by 50% while supporting Agile Scrum releases and faster defect resolution.

Selected Projects

Expense Tracker – Full-Stack Platform Aug 2023 – Dec 2023
Java, Spring Boot, React, Redux, Kafka, Docker

- Built a full-stack expense management platform with 5+ Spring Boot microservices and a React/Redux frontend, processing 1,000+ simulated transactions through scalable, API-driven workflows.
- Implemented asynchronous messaging, gateway routing, and containerized deployments, improving fault isolation, developer setup speed, and overall platform maintainability.

AI Process Automation Lab 2025 – 2026
AI Agents, Java, Python, Rules, APIs

- Prototyped AI-assisted agents and rules-based automations for internal business processes, combining model outputs, deterministic validation, and backend APIs to reduce repetitive human intervention.
- Evaluated alternative workflow designs in an R&D setting, improving process accuracy, explainability, and handoff reliability for production-oriented automation use cases.

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 | CGPA: 8.8
