Sanskar Jain

Backend Engineer | Data Pipelines | Search & Document Processing
Pune, Maharashtra, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Backend Engineer with 2+ years of experience building and operating data-heavy production systems on AWS, with hands-on ownership high-volume REST APIs, and asynchronous processing. Strong in third-party API integrations, and reliability-focused backend design across Python, .NET, and Node.js/TypeScript environments.

Key Skills

Backend & Data Systems: REST APIs, data ingestion pipelines, ETL, asynchronous processing, microservices, web scraping, large-scale crawling, third-party APIs
Search & Data Quality: Full-text search familiarity, indexing strategy, relevance tuning, query optimization, deduplication, consistency validation, schema normalization
Languages & Cloud: Node.js, TypeScript, Python, C#, .NET 8, AWS S3, AWS Lambda, AWS SNS, Amazon SQS, Docker, Kubernetes, Terraform, CI/CD

Experience

Verisk Analytics Jan 2024 – Present
Backend Engineer Hyderabad, India

- Engineered production ingestion and import/export workflows across 30+ heterogeneous data types using asynchronous processing, AWS S3 presigned URLs, and MongoDB, reducing transfer time by 40% while improving correctness checks for malformed and inconsistent inputs.
- Designed and operated backend APIs and data services handling 200K+ weekly requests, with stronger validation, idempotent processing, and deduplication safeguards that reduced user-reported data issues by 25% and improved service reliability.
- Built pipeline components in Node.js/TypeScript and .NET for integrating third-party sources, transforming payloads into normalized internal schemas, and coordinating retries, backfills, and failure handling through SQS, SNS, Lambda, and queue-backed workers.
- Improved data retrieval performance by applying search indexing and query tuning patterns to high-volume datasets, reducing lookup latency by 35% and making results more consistent for downstream users and services.
- Led backend modernization to .NET 8 and strengthened CI/CD in Azure DevOps, cutting deployment time by 50%, improving observability, and making production rollouts safer for data-heavy services.

Projects

Scholarly Document Intelligence Pipeline 2025 – 2026
Python, TypeScript, PubMed, Crossref, arXiv, LLMs

- Worked on a pipeline that crawled academic metadata and PDFs from PubMed, Crossref, and arXiv, normalized heterogeneous records, and extracted structured entities from unstructured documents using OCR and LLM-assisted parsing.
- Supported PDF extraction, chunking, metadata reconciliation, and storage workflows with validation and deduplication rules to improve downstream document quality and retrieval accuracy.

Search & Crawling Platform 2024 – 2025
Node.js, TypeScript, PostgreSQL, Search APIs

- Contributed to scraping workflows for third-party sources, including rate limiting, retry orchestration, and change detection to keep indexed content fresh and reliable.
- Built REST APIs for document discovery and filtered retrieval, with exposure to search-oriented query patterns and index update flows.

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 | 8.8 GPA
