Sanskar Jain

Backend Engineer — Cloud-Native Systems — Distributed Systems
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Backend engineer with 2+ years of experience building cloud-native APIs, event-driven microservices, and distributed systems at Verisk Analytics. Strong fundamentals in data structures, algorithms, and object-oriented programming. Proven ability to design scalable backend services on AWS, work with SQL and NoSQL databases, and ship production features end-to-end in Agile teams. Passionate about solving meaningful problems in SaaS, data systems, and cloud infrastructure.

Skills

Languages: Java, Python, C#, TypeScript, Golang (familiar)
Backend & Systems: REST APIs, Microservices, Distributed Systems, Event-Driven Architecture, OOP, Data Structures & Algorithms
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, Terraform, CI/CD Pipelines
Databases: PostgreSQL, MongoDB, MySQL, Redis
Tools: Git, Azure DevOps, Kafka, Postman, Swagger, Splunk, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and built **RulesRunner**, a distributed microservice using **AWS SQS** that offloaded compliance checks from the client, reducing response time from **3000ms to 500ms** (83% improvement) and enabling independent scaling.
- Engineered scalable backend for data import/export of **30+ data types** using async processing, **AWS S3** presigned URLs, and **MongoDB**, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Built production REST APIs handling **200K+ weekly requests** with structured error handling, input validation, and **Swagger**-documented contracts, ensuring high availability and API stability.
- Improved API response time by **34%** via **Redis** caching, connection pooling, and targeted query optimisation on high-traffic endpoints.
- Designed reliable event-driven pipelines using **AWS SNS**, Lambda, and S3 with idempotent processing and retry/backoff handling, eliminating message loss under failure conditions.
- Migrated legacy services to modern frameworks, cutting technical debt by **55%** and improving runtime performance by **30%** through dependency injection, async patterns, and updated SDK tooling.
- Slashed deployment time by **50%** by overhauling CI/CD pipelines with staged gates, parallel jobs, and automated testing, eliminating all manual release steps.
- Reduced mean time to diagnose incidents by instrumenting services with structured logging and **Splunk** dashboards for real-time error trend and latency monitoring.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Architected a cloud-native expense tracker using **Java/Spring Boot** with **5+ microservices** and async **Kafka**-based inter-service communication.
- Containerised all services with **Docker**, reducing local environment setup time by **60%** and enabling consistent deployments.
- Integrated **Kong API Gateway** for routing, load balancing, and authentication; simulated **1000+** transactions end-to-end.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Developed a data-driven stock advisory platform using **Python** and LSTM models for 30-day predictions with real-time data ingestion.
- Integrated Yahoo Finance API and Firebase backend; deployed as a scalable web application using Streamlit.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
