Sanskar Jain

Hyderabad, Telangana, India
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Backend engineer with 2+ years of experience building cloud-native distributed systems and containerized microservices at Verisk Analytics. Hands-on with AWS (S3, SNS, SQS, EKS, ECS, Lambda), Docker, Kubernetes, and CI/CD pipelines powering SaaS products at scale. Passionate about building high-quality, robust managed services with a focus on reliability, performance, and operational excellence.

Skills

Languages: C#, Java, Python, TypeScript, Go (familiar)
Distributed Systems: Microservices, Event-Driven Architecture, Kafka, SNS/SQS, REST APIs, GraphQL
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, ECS, Lambda), Azure DevOps, Docker, Kubernetes, Terraform, CI/CD
Databases: MongoDB, PostgreSQL, MySQL, Redis/ElastiCache
Tools: Podman, Postman, Swagger, Splunk, Bitbucket, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Built **RulesRunner**, a distributed microservice using **SQS** that offloaded compliance checks from the client, reducing latency from **3000ms to 500ms** (**83%**), decoupling logic for independent scaling across the **SaaS platform**.
- Engineered a scalable backend for **Xactimate's** import/export of **30+ data types** using async processing, **AWS S3** presigned URLs, and **MongoDB**, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Achieved reliable **200K+ weekly requests** by building **ASP.NET Core** REST APIs with structured error handling, input validation, and Swagger-documented contracts, ensuring API stability for the managed service.
- Eliminated message loss under failure conditions by designing **AWS SNS**, Lambda, and S3 pipelines with idempotent processing and retry/backoff handling for reliable **distributed** async delivery.
- Cut technical debt by **55%** and improved runtime performance by **30%** through migrating legacy services to **.NET 8**, modernising dependency injection, async patterns, and containerized deployments.
- Slashed deployment time by **50%** by overhauling CI/CD pipelines with staged gates, parallel jobs, and automated test integration, eliminating all manual release steps.
- Accelerated build and test cycle speed by **33%** through parallelised testing, build caching, and pipeline optimisation, enabling the team to consistently ship **10+ features per quarter**.
- Improved API response time by **34%** via **Redis**/ElastiCache caching, connection pooling, and targeted query optimisation on hot-path endpoints serving the **cloud-hosted** product.
- Reduced mean time to diagnose production incidents by instrumenting services with structured logging and **Splunk** dashboards, proactively surfacing error trends, latency spikes, and pipeline failures.

Projects

Expense Tracker – Distributed Microservices Application Aug 2023 – Dec 2023

- Built a full-stack application using **Spring Boot** with **5+ microservices**, async **Kafka** communication, and **Kong API Gateway** for routing and load balancing.
- **Containerized** all services with **Docker** and orchestrated with **Kubernetes**, reducing environment setup time by **60%** and simulating **1000+** transactions end-to-end.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Developed stock advisory platform using Python and LSTM models for 30-day predictions.
- Integrated Yahoo Finance API, Firebase, and deployed using Streamlit.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
