Sanskar Jain

Backend Engineer | Java, Go | REST, GraphQL APIs & Distributed Systems
Hyderabad, Telangana, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Backend engineer with 2+ years of experience designing and shipping scalable, high-availability distributed systems at Verisk Analytics. Strong foundation in OOP (Java, C#), data structures, algorithms, and system performance. Experienced building REST and GraphQL APIs, leveraging core AWS infrastructure, and owning CI/CD pipelines end-to-end in fast-paced Agile environments.

Key Skills

Languages: Java, Go (familiar), C#, Python, TypeScript
APIs & Protocols: REST APIs, GraphQL APIs, HTTPS/SSL/TLS, OAuth, Input Validation & API Security
Distributed Systems: Microservices, Event-Driven Architecture, Kafka, SQS/SNS, Redis, Scalability & Availability Design
Cloud & DevOps: AWS (S3, SQS, SNS, Lambda, EKS, ECS), CI/CD, Docker, Kubernetes, Terraform
CS Fundamentals: Data Structures & Algorithms, Time/Space Complexity, System Design, OOP Principles

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Architected **RulesRunner**, a distributed microservice processing **200K+** weekly messages via **AWS SQS**, cutting client-side latency from 3000ms to 500ms (**83%**) through OOP-driven decoupling and algorithm-optimised rule evaluation.
- Designed and shipped **REST** and **GraphQL APIs** handling **200K+ requests/week** over **HTTPS** with input validation, structured error handling, and Swagger-documented contracts for clear ownership.
- Built scalable **AWS SNS/Lambda/S3** event-driven pipelines with idempotent processing, retry/backoff, and dead-letter queues, ensuring high availability and zero message loss under failure conditions.
- Improved API response time by **34%** via **Redis**/ElastiCache caching, connection pooling, and **SQL** query optimisation on hot-path endpoints — demonstrating hands-on performance tuning.
- Engineered backend for import/export of **30+ data types** using async processing, **AWS S3** presigned URLs, and MongoDB, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Reduced deployment time by **50%** by overhauling **CI/CD** pipelines (Azure DevOps) with staged gates, parallel jobs, and automated test integration, eliminating all manual release steps.
- Cut technical debt by **55%** and improved runtime performance by **30%** migrating legacy services to **.NET 8**, applying modern DI patterns and async best practices.
- Instrumented distributed services with structured logging and **Splunk** dashboards, enabling real-time diagnosis of latency spikes and pipeline failures across a distributed environment.
- Accelerated build and test cycle by **33%** through parallelised testing and build caching, enabling consistent delivery of **10+ features per quarter** in a fast-paced Agile team.

Projects

Expense Tracker – Full-Stack Microservices Aug 2023 – Dec 2023
Java, Spring Boot, Kafka, PostgreSQL, Docker

- Built expense platform using **Java**/Spring Boot with **5+ microservices**, async **Kafka** messaging, REST APIs secured over **HTTPS**, and Kong API Gateway for routing and auth.
- Designed normalised schema with indexing; wrote complex **SQL** queries for analytics across **1000+** simulated transactions; containerised with **Docker** for reproducible environments.

Stock Recommendation & Prediction Apr 2022 – Jun 2022
Python, MySQL, LSTM, Streamlit

- Developed **Python**-based advisory platform using LSTM models for 30-day predictions with **MySQL** backend and optimised SQL queries for time-series data aggregation.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering, Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 | CGPA: 8.8
