Sanskar Jain

Hyderabad, Telangana, India
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Backend engineer with 2+ years of experience building distributed microservices, event-driven systems, and REST APIs at scale. Proficient in **Java (Spring Boot)**, cloud-native architectures on **AWS**, and containerised deployments with **Docker** and **Kubernetes**. Strong CS fundamentals in data structures, algorithms, operating systems, and distributed systems. Thrives in collaborative Agile teams with on-call ownership and full SDLC accountability from design to production.

Skills

Languages: Java, C#, Python, TypeScript
Frameworks: Spring Boot, Hibernate, ASP.NET Core, REST APIs, GraphQL, Microservices
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, ECS, Lambda), Docker, Kubernetes, Terraform, CI/CD
Messaging & Data: Kafka, Redis, MongoDB, PostgreSQL, MySQL
Practices & Tools: Agile/Scrum, On-call rotation, Splunk, Jira, Postman, Swagger, Git

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Architected **RulesRunner**, an event-driven microservice using **AWS SQS** that decoupled compliance processing from the client, reducing response latency from **3000ms to 500ms** (**83%**) and enabling independent scaling across distributed workflows.
- Designed and maintained **ASP.NET Core** and **Spring Boot** REST APIs handling **200K+ weekly requests** with structured error handling, input validation, and Swagger-documented contracts in an Agile/Scrum environment.
- Engineered reliable async pipelines using **AWS SNS, Lambda, and S3** with idempotent processing, retry/backoff strategies, and dead-letter queues, eliminating message loss under failure conditions.
- Improved API response time by **34%** via **Redis** caching, connection pooling, and targeted query optimisation on hot-path endpoints serving distributed clients.
- Cut technical debt by **55%** and improved runtime performance by **30%** through migrating legacy services to modern frameworks, modernising dependency injection and async patterns.
- Reduced deployment time by **50%** by overhauling CI/CD pipelines with staged gates, parallel jobs, and automated test integration across **Docker**-containerised services deployed on **Kubernetes (EKS)**.
- Participated in **on-call rotation**, reducing mean time to diagnose production incidents by instrumenting services with structured logging and **Splunk** dashboards for real-time alerting.

Projects

Expense Tracker – Distributed Microservices Application Aug 2023 – Dec 2023

- Built a full-stack application using **Java Spring Boot** with **Hibernate** ORM, **5+ microservices**, and async **Kafka** event-driven communication across bounded contexts.
- Containerised all services with **Docker** and orchestrated with **Kubernetes**; integrated **Kong API Gateway** for routing, load balancing, and authentication; simulated **1000+** transactions end-to-end.
- Implemented circuit breaker patterns with **Resilience4j** and distributed tracing with Zipkin for fault-tolerant inter-service communication.

Real-Time Notification Service Mar 2023 – May 2023

- Designed a scalable notification engine in **Java (Spring Boot)** supporting SMS, email, and push channels with pluggable provider adapters and **Kafka**-based event ingestion.
- Achieved sub-second delivery latency for **10K+ concurrent users** using async processing, connection pooling, and rate-limiting with token bucket algorithms.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering 2024
Vishwakarma Institute of Technology, Pune (S.P.P.U) — CGPA: 8.8
Relevant Coursework: Data Structures & Algorithms, Operating Systems, Distributed Systems, Database Management, Computer Networks
