## Summary

C# and Java software engineer with 2+ years of experience in application development, unit testing, and CI/CD-driven delivery at Verisk Analytics. Proficient in coding to industry standards, performing build and deployment activities, and monitoring production systems for availability and reliability. Experienced in assessing change impact, collaborating on requirements, and adhering to continuous integration and source code management practices in Agile teams.

## Skills

**Languages:** C#, Java, Python, TypeScript
**Application Development:** .NET 8, ASP.NET Core, Spring Boot, REST APIs, Microservices, Unit Testing, Kafka, Redis
**Build & DevOps:** CI/CD, Azure DevOps, Docker, Kubernetes, Terraform, AWS (S3, SNS, SQS, EKS, Lambda)
**Source Code & Monitoring:** Bitbucket, Git, Splunk, Postman, Swagger, Jira
**Databases:** MongoDB, PostgreSQL, MySQL

## Experience

**Verisk Analytics** Jan 2024 – Present
**Software Engineer II, Hyderabad, India**

- Delivered **RulesRunner**, a C# microservice with unit tests covering edge-case compliance logic, reducing client-side wait time **83%** (3000ms to 500ms) and decoupling rules execution for independent scaling.
- Slashed deployment time by **50%** by overhauling **Azure DevOps CI/CD** pipelines with staged gates, parallel jobs, automated test integration, and structured source code branching, eliminating all manual release steps.
- Accelerated build and test cycle speed by **33%** through parallelised unit testing, build caching, and pipeline optimisation, enabling consistent delivery of **10+** features per quarter.
- Engineered scalable **C# ASP.NET Core** APIs handling **200K+** weekly requests with structured error handling, input validation, and Swagger-documented contracts, ensuring application stability and clear ownership.
- Monitored production system availability and reliability using **Splunk** dashboards with structured logging, reducing mean time to diagnose incidents by surfacing latency spikes and pipeline failures in real time.
- Assessed and implemented change impact analysis before migrating legacy services to **.NET 8**, cutting technical debt by **55%** and improving runtime performance by **30%** with no regression incidents.
- Improved API response time by **34%** via **Redis** caching and query optimisation on high-traffic endpoints, applying coding guidelines and peer-reviewed PRs for each change.

## Projects

**Expense Tracker – Full-Stack Microservices Application** Aug 2023 – Dec 2023

- Built a full-stack Java **Spring Boot** application with **5+** microservices, async **Kafka** communication, and end-to-end unit and integration tests validating **1000+** transactions.
- Containerised all services with **Docker** and integrated **Kong API Gateway** for routing and authentication; reduced local setup time by **60%**.

## Certifications

**AWS Certified Cloud Practitioner** Amazon Web Services — Oct 2024

## Education

**Bachelor of Technology in Computer Engineering**
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 — CGPA: 8.8
