Summary

Backend Engineer with 2 years of experience in developing scalable, cloud-native systems. Engineered backend solutions at Verisk Analytics, seeking opportunities to leverage adept skills in C#, microservices, and web API to enhance future projects and drive efficient backend development.

Skills

Languages: C#, Java, Python, TypeScript
Backend: .NET 8, Spring Boot, RESTful APIs, Microservices, ASP.NET Core, Kafka
Cloud & DevOps: AWS (S3, SNS, Lambda), Azure DevOps, CI/CD, Terraform, AWS CDK, Kubernetes
Databases: MongoDB, PostgreSQL, MySQL
Tools: Docker, Postman, Swagger, Splunk, Bitbucket, Jira

Experience

Verisk Analytics Jan 2024 – Present
Backend Engineer Hyderabad, India

- Engineered a scalable backend for Xactimate's import/export of 30+ data types using asynchronous processing, AWS S3 presigned URLs, and MongoDB persistence, reducing data transfer time by 40% and reducing user-reported issues by 25%.
- Designed and delivered cloud-native REST APIs for handling high-volume service requests, improving average response time by 35% and enhancing overall system reliability.
- Led the migration of legacy services to .NET 8, which reduced technical debt by 60% while improving code maintainability and runtime performance by 30%, which streamlined future development.
- Built and optimized CI/CD pipelines using Azure DevOps to streamline build, test, and deployment processes across multiple environments, cutting deployment time by 50% and accelerating release frequency.
- Architected a scalable, event-driven system leveraging AWS SNS, Lambda, and S3 for robust, asynchronous processing and efficient data storage.
- Boosted development cycle speed by 40% by introducing parallel testing, implementing Redis/ElastiCache caching, and optimizing build configurations, enabling faster feature delivery.
- Clearly articulated architectural decisions to stakeholders, worked in a 6 - 8 - member agile team to deliver over 10 backend features every quarter, and taught 2 - 3 junior developers on cloud-first best practices, decoupled architecture, and backend design patterns.
- Developed and maintained ASP.NET Core Web API endpoints supporting over 200K weekly requests, leveraging Swagger and automated testing for robust API documentation and 30% reduction in support inquiries over 12 months.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Created a full-stack application for tracking expenses using Java Spring Boot, with five or more microservices that sustain more than 1,000 simulated user transactions and adhere to domain-driven and loosely coupled architecture principles.
- Apache Kafka and Zookeeper cluster coordination were used to implement asynchronous inter-service communication.
- All microservices were containerized using Docker, which allowed for scalable, repeatable deployments across development and staging environments and reduced environment setup time by around 60%.
- Integrated Kong API Gateway for centralized request routing, load balancing, and authentication.

Stock recommendation and prediction Apr 2022 – Jun 2022

- Built a stock advisory platform using Python and LSTM-based time-series models to forecast 30-day market trends across investment horizons.
- Integrated Yahoo Finance API for real-time data, Firebase for database management, and Streamlit for deployment.

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U), Pune, Maharashtra 2024 | 8.8
