Summary

C# and .NET backend engineer with 2+ years of experience in shipping cloud-native APIs and event-driven microservices at Verisk Analytics. Hands-on in building async pipelines, designing distributed systems, owning REST APIs end-to-end, and delivering via CI/CD pipelines. Consistently reduced latency, improved reliability, and shipped production systems from design to deployment in Agile teams.

Skills

Languages: C#, Java, Python, TypeScript
Backend: .NET 8, ASP.NET Core, Spring Boot, REST APIs, GraphQL APIs, Microservices, Kafka, Redis
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, ECS, Lambda), CI/CD, Terraform, AWS SDK, Docker, Kubernetes
Databases: MongoDB, PostgreSQL, MySQL
Tools: Azure DevOps,Podman, Postman, Swagger, Splunk, Bitbucket, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Built **RulesRunner**, a server-side microservice using **SQS** that offloaded estimate compliance checks from the client, reducing client-side wait time from **3000ms to 500ms** (**83%**), cutting overhead, and decoupling rules logic to enable flexible scaling across workflows.
- Cut technical debt by **55%** and improved runtime performance by **30%** through migrating legacy services to **.NET 8**, modernising dependency injection, async patterns, and SDK tooling.
- Slashed deployment time by **50%** by overhauling **Azure DevOps** CI/CD pipelines with staged gates, parallel jobs, and automated test integration, eliminating all manual release steps.
- Reduced data transfer time by **38%** and user-reported issues by **25%** by engineering a scalable backend for **Xactimate's** import/export of **30+** data types using async processing, AWS S3 presigned URLs, and MongoDB.
- Achieved reliable **200K+** weekly requests by building **ASP.NET Core** REST APIs with structured error handling, input validation, and **Swagger**-documented contracts, ensuring API stability and clear ownership.
- Accelerated build and test cycle speed by **33%** through parallelised testing, build caching, and pipeline optimisation, enabling the team to consistently ship **10+** features per quarter.
- Improved API response time by **34%** via **Redis**/ElastiCache caching, connection pooling, and targeted query optimisation on hot-path endpoints.
- Eliminated message loss under failure conditions by designing **AWS SNS**, Lambda, and S3 pipelines with idempotent processing and retry/backoff handling for reliable async delivery.
- Reduced mean time to diagnose production incidents by instrumenting services with structured logging and **Splunk** dashboards, surfacing error trends, latency spikes, and pipeline failures in real time.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built a full-stack expense tracker using **Spring Boot** with **5+** microservices and async **Kafka** communication across services.
- Containerised all services with **Docker**, reducing local environment setup time by **60%**.
- Integrated **Kong API Gateway** for routing, load balancing, and authentication; simulated **1000+** transactions end-to-end.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Developed stock advisory platform using Python and LSTM models for 30-day predictions.
- Integrated Yahoo Finance API, Firebase, and deployed using Streamlit.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
